Aim of the Project

The objective of this study was to evaluate the effects of xxxxxxxxx on growth performance, intestinal integrity, and health status in broilers fed diets rich in rye.

Study location

The study was carried out on the test facility Mezinárodní testování drůbeže, s.p., (next MTD, s.p. only), Ústrašice, Czech Republic. Feed samples were sended for the contents of nutrients by xxxxxxxxx.

Trial period

Beginning of the trial:	16 September 2020
End of the trial:	20 October 2020
Finishing of the final report:	November 2020

Study responsibility

Ing. Jan Tyl was the independent Study Director, responsible that the trial is conducted according to the protocol. Ing. Hana Horná was responsible for daily animal care at the test facility. Full details of study's responsibility are provided below.

Persons involved in the trial

Study Investigator: Ing. Jan Tyl

Material and methods

Birds

In total there were 7800 day old chicks (males) of xxxxxxxxx. Day-old chicks were randomly distributed into 4 dietary treatments with 15 replicates per treatment and 130 chicken per replicate.

Origin 1-day old chicks:

breeder company – xxxxxxxxx

parent flock – xxxxxxxxx

age of the breeding flock -59 weeks

Experimental treatments:

Tr. No.	Tr.	Description	No. of pen	No. of chick
1	T1	xxxxxxxxxx	15	1950
2	T2	xxxxxxxxxx	15	1950
3	T3	xxxxxxxxxx	15	1950
4	T4	xxxxxxxxxx	15	1950

Housing system

Chickens were kept in the windowless chicken house with full climatic control, on deep litter. The heating program was conducted according to the xxxxxxxxx. Drinking water was supplied ad libitum by nipple drinkers. Each pen was equipped with manually filled tube feeders. Bedding material was wood shaving.

Light was provided as follows during the experimental period:

<u>Lighting programme:</u>	Day 1 - 7	23 hours of light + 1 hour of darkness
	Day 8 - 32	18 hours of light + 6 hours of darkness
	Day 33 - 35	23 hours of light + 1 hour of darkness
<u>Stocking density:</u>	16 broilers per square meter	

The conduct of the trial was conformed to the national welfare legislation.

Veterinary precautions

The chicken house was disinfected with xxxxxxxx before the chick placement.

On days 1 and 12 the chicken were vaccinated with xxxxxxxx (the spray in the eyes). On the first days old chickens was applied the water solution of permanganate.

Feeds and Diets

Chickens were fed ad libitum according to three phase feeding programme. The test phases were 0-10 days of age for the starter BR1, 11-24 days of age for the grower BR2 and 25-35 days of age for the finisher BR3.

Feed was produced by International Poultry Testing Station Ústrašice. The composition of diets is shown in following tables.

Composition of the feed

Parameters recorded and Methods applied

Live weight

Live weight was measured on day 1 and on day 10 (all the birds in each pen were weighed altogether). On day 24 of age birds were weighed individually, without fasting. On day 35 birds were weighed individually, after 12 hours of fasting.

Feed consumption

Feed consumption was determined per pen for the feed – starter, grower and finisher.

Weight gain

Weight gain per phase and average daily weight gains were calculated for the periods 1 – 10 days, 11 – 24 days, 25 – 35 days and for the overall experiment (1 – 35 days).

Feed conversion ratio

Feed conversion ratio was calculated as feed consumption per 1 kg of live weight and per 1 kg of weight gain for the periods 1 – 10 days, 11 – 24 days, 25 – 35 days and for the overall experiment (1 – 35 days). The calculation was included weight of deaths.

Mortality

All pens were checked twice a day to see if there were any dead or ill birds. Dead chickens were registered by date, weight and reason of mortality on the day of death. Mortality was recorded for the periods 1 – 10 days, 11 – 24 days, 25 – 35 days and 1 – 35 days.

Foot pad lesions

One third of the animals were recorded at the end of the feeding trial according the scale.

Statistical analyses

Performance results of live weight (on days 1, 10, 24 and 35) were statistically evaluated using the ANOVA model (Duncan test) and the nonparametric model (Kruskal-Walis test).

Statistical analyses of performance results

Performance results were statistically evaluated using the ANOVA model (Duncan test) or nonparametric model (Kruskal-Wallis test).

The following symbols are used for levels of significance:

$p \leq 0,001$	* * *	- differences are very high significant
$p \leq 0,01$	* *	- differences are high significant
$p \leq 0,05$	*	- differences are significant
$p > 0,05$	o	- differences are not significant
